

impatica for BlackBerry® Enterprise Server

“I can see!”

At last. PowerPoint™ as it's meant to be seen.

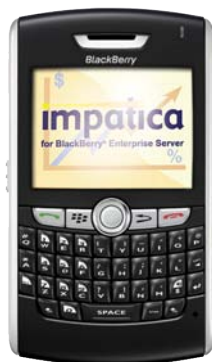

Graphics, animation and interactivity in a PowerPoint™ presentation are critical to conveying its full meaning.

PowerPoint is a powerful tool for communication. Each day, people create millions of presentations combining text, dynamic graphics, charts, rich animation and hyperlinks. These PowerPoint presentations make their way into inboxes around the world as vital parts of many e-mail messages. For millions of BlackBerry users who already know the importance of getting e-mail messages instantly, the ability to view these PowerPoint attachments as fully functioning presentations is critical.

Enter Impatica for BlackBerry Enterprise Server.

With Impatica for BlackBerry Enterprise Server, BlackBerry users now have the power to view entire PowerPoint presentations directly on their handhelds. No longer do they have to wait until they can access their office computers to see what they are missing. Instead, they get the message immediately and can react without losing critical response time—making them even more effective while away from the office.

No wonder people are cheering.

How it Works

Impatica for BlackBerry Enterprise Server converts Microsoft PowerPoint e-mail attachments into a compact format suitable for viewing on BlackBerry wireless handhelds. It consists of two components:

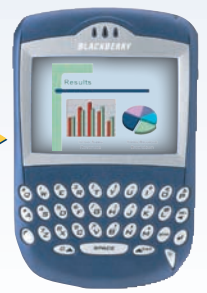

- The Impatica for BES Server Software that runs on a server with or separate from the BlackBerry Enterprise Server;
- The Impatica Attachment Handler that runs on each BlackBerry handheld on which PowerPoint attachment viewing is desired.

When a BlackBerry handheld user receives notification of an e-mail message with a PowerPoint attachment and chooses View Attachment, the Impatica Attachment Handler sends a conversion request to the

Impatica for BES Server Software. The Impatica for BES Server Software then transforms the PowerPoint presentation into a format suitable for viewing on the handheld BlackBerry and sends it to the handheld for playback.

BEFORE: PowerPoint presentations in plain text.

AFTER: View PowerPoint presentations with rich text, images, animation, and more!

Seamless User Experience

Since standard BlackBerry menus and controls are used, there is nothing new for users to learn. They simply select View Attachment, then experience presentations that can feature rich text, images, charts, graphs, hyperlinks, animation and slide transition effects.

- Presentations are automatically resized and oriented to best fit the target BlackBerry screen
- Menu and keypad controls allow users to navigate between slides
- Unlimited zooming lets users magnify slides
- Presentation storage allows users to revisit presentations, even without wireless coverage

Product Features

Impatica for BlackBerry Enterprise Server supports most of the features in PowerPoint, for example:

Text:

- Bullets, fonts, formatting, and rotation
- Picture bullets and numbered lists
- Footers, dates and slide numbers

Slides:

- Slide transitions, entry and exit animations
- Timed slide advancement
- Advance on mouse click
- Hyperlinks

Presentations:

- Design templates
- Playback control menu

Graphics:

- WordArt and shapes
- JPEG, PNG, GIF and other images
- Clip art, tables, charts and graphs
- Gradient, picture, pattern and texture fills and transparency

Support and Upgrade Policy

Support:

- Technical support via toll-free telephone number and e-mail
- Technical support is provided free of charge for a period of 1 year after purchase; additional support is available for a fee
- Online FAQs, tutorials, user guide
- Comprehensive manuals

Upgrades:

- Updates and maintenance releases are free for licensed users
- Upgrades are included in the additional support package

System Requirements

Server:

- Pentium 4 or later
- 1 GB of RAM
- Microsoft Windows 2000 or later
- BlackBerry Enterprise Server 4.0 on same or separate server

Handheld:

- Java-based BlackBerry handheld
- BlackBerry software 3.8 or later
